The security is always the main concern and it is never safe to store important files or data in a local disk. The Benefits of having a cloud based application: Is it easy to upgrade and update your application when a new version is released? Makes you stress free if one of the server is not working. You can easily and quickly focus on some other tasks. Is it easy to provide a demo to your client? You don't need to worry about the local disk being secure. While testing the application, can you download it on any device for testing and checking out the app? Your site can easily be backed up. It is better to store your sensitive files in a cloud. Why we prefer to develop an offline application: The app which is not connected to internet can be in sync with the server as it is a sort of a replica of the server. Q: When should you use "you should", "shouldn't", "wouldn't", "would", "wouldn't" etc? I seem to be seeing more and more of these grammatical variations on the site lately, but no one seems to have a reference on them. E.g. Do you agree? You should. = We agree. Or You shouldn't have. Or Wouldn't you? A: The four different possible ways of phrasing "you should" are colloquial: You should! You'd better! You better not! You shouldn't have! The last three are marked more as commands, while the first two are more friendly reminders. A: All of those are similar, but you would only use them in certain situations. "You should" is a casual, informal way of saying "You should do it". "You shouldn't" is a casual, informal way of saying "You shouldn't do it!". "Wouldn't" is informal and casual. You'd use it if you were talking about something you had no intention of
